

Are you 16-20 years old and want to attend upper secondary school in Iceland next school year 2022–2023?

We recommend you contact the schools as soon as possible.

All students in Iceland that have finished lower secondary school can enroll in upper secondary school, regardless of their academic performance.

Most upper secondary schools (“framhaldsskólar”) offer a broad curriculum in conventional academic education, vocational education and arts. Students receive various degrees depending on their curriculum. Most schools also offer preparatory education and special study programmes for students with disabilities. Conventional academic education takes 3 years and vocational education 4 years, including workplace study.

The following upper secondary schools offer a special integration class where you will receive information on educational options, be assessed, start Icelandic courses and meet students your own age. If another school is assessed more suitable to your needs, the school will assist with your transfer.

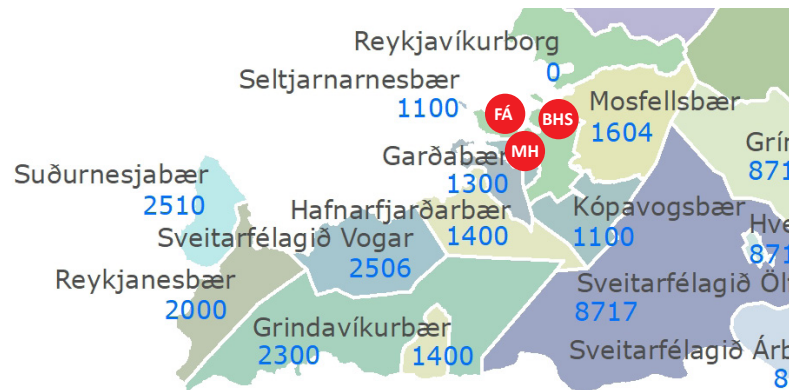

The schools are spread throughout the country. If you are 16-20 years old and have a residence permit, all you need to do is to contact the school’s contact person listed below.

If you are older than 20, you can contact the schools to find out if you are eligible for enrollment.

Reykjavík and surroundings:

Menntaskólinn við Hamrahlíð (MH)

is located in Hamrahlíð in Reykjavík and hosts around 1100 students. It is ideally located with regard to public transportation. The school offers a progressive academic education, a dance program and a special study program for students with disabilities. It also offers an IB program (International Baccalaureate), taught in English. Classes are taught on-site only.
